

Did your law enforcement agency wind-up with the *wrong* property/evidence room management system?

Or, do you just want to start with the best? Either way, **ERIN** is here to help.

ERIN, or *Evidence Room Information Network* from ERIN Technology, is:

- the browser-based, trouble-free solution to log, track, retrieve and transfer crime scene evidence or other property while maintaining chain of custody through bar-coding or RFID
- the software using the newest technology available
- the capability to take evidence-gathering to the crime scene itself
- the one with full mobile support using smart-phones, IPADs, tablets
- picture, document, and video attachments
- unlimited user license
- run in our secure hosted environment or on a server at your site

And, best of all, you don't have to start over.

ERIN begins where your old system leaves off, keeping your decades of data collection intact, but easier to access.

Please contact us for details and a no-obligation demonstration.
